Documentation created by **Florian Lauka** at **Redicion Studio**

Asset SETUP

Below is a **setup video** that **guides** you through the process of **setting up** the **Horror Multiplayer Template by Redicion Studio**:

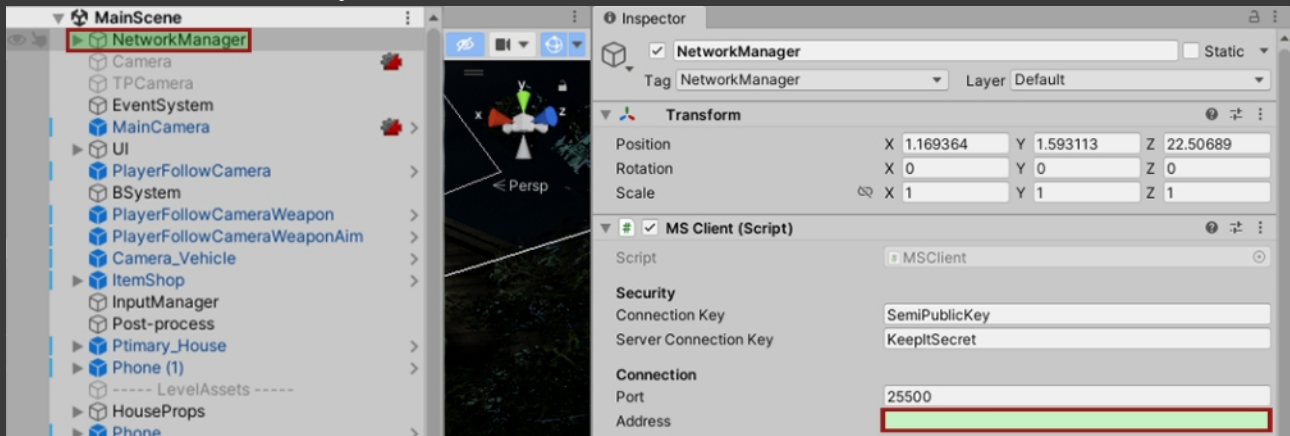

ASSET SETUP

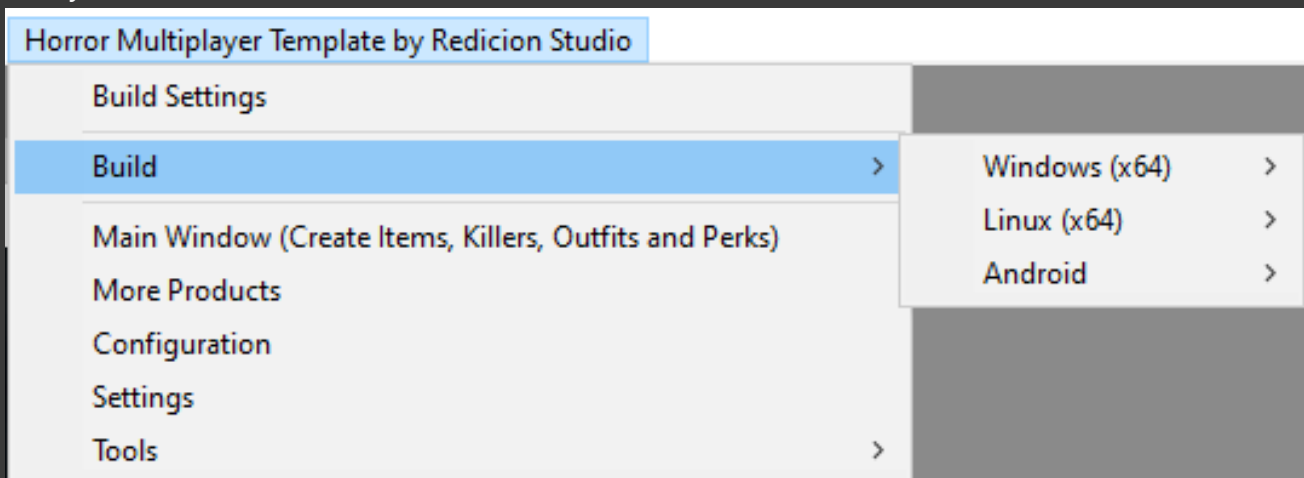

SERVER SETUP

Open the "**MainScene.unity**" scene (Assets/Horror Multiplayer Template by Redicion Studio/Scenes/MainScene.unity) and select the "**NetworkManager**" game object in the scene hierarchy. Insert your **IP address** into the "**Address**" variable of the "**MSClient.cs**" script and **save** the **scene**. For testing on your **local computer**, you can use the **localhost address** "**127.0.0.1**" or your **IPv4 address**.

Build the **master server** and **game server** for **Windows** or **Linux** simply via the "**Build**" entry:

After you have built the **master server** and the **game server**, run the **master server** first and then the **game server**. When both **servers** are fully started, run the client by entering the **play mode** in the editor when you are in the "**MainScene.unity**" scene or **build and run** the **client** via the "**Build**" entry.

After you have launched the **client**, you will need to **authenticate**, which means you must create an **account**. Please refer to the "**User Authentication**" section in this **guide** to learn how to **create an account**.

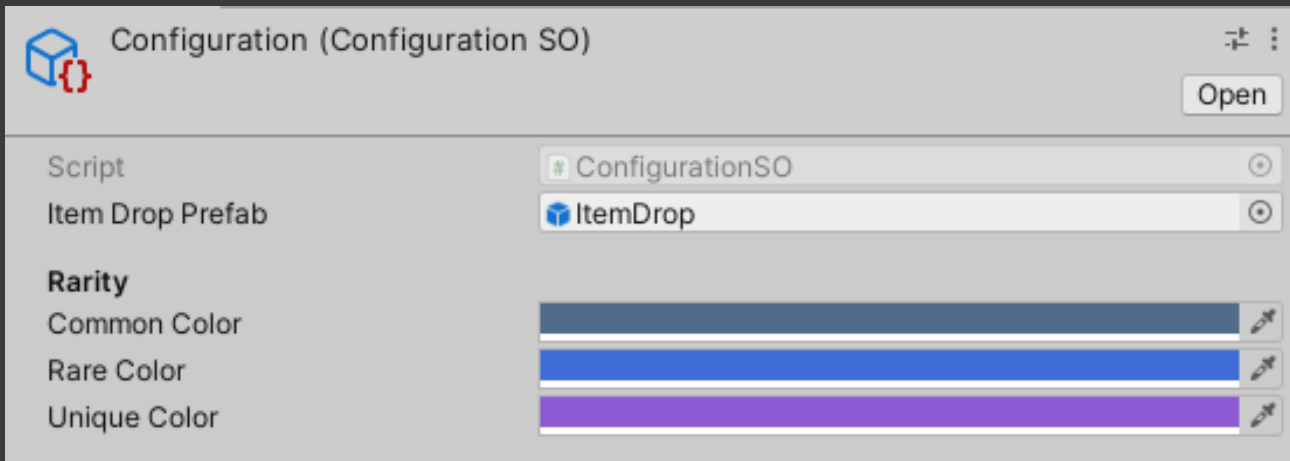

[Click here](#) to go to the "**User Authentication**" section.

Add ITEM

In the following **video**, you will **learn** how to **add** a **new item**:

To change the display color of the **item** rarity levels, open the "**Configuration.asset**" via the "**Horror Multiplayer Template by Redicion Studio/Configuration**" entry.

Add PERK

In the following **video**, you will **learn** how to **add** a **new perk**:

Create Perk

Create New Perk

You can find a tutorial video on creating perks at this URL:

RUN MASTER AND GAME SERVERS ON A VPS

This video guide demonstrates how to **build**, **upload**, and **launch** the **master server** and **game server** on a **Linux VPS**:

If your project is using the **HDRP (High-Definition Render Pipeline)**, make sure to **configure** the **project settings** shown in the **video**, which you can access via the following **URL**. Otherwise, problems may arise when building the game server for Linux:

<https://www.youtube.com/watch?v=WVC1fOdRclo>

ADDING A NEW ACCOUNT DATA ENTRY

This **video guide** explains how to **add** a **new account data entry**:

```
namespace MasterServer {  
  
[System.Serializable] // ?  
[Table("Accounts")]  
public class AccountData {  
    [PrimaryKey, AutoIncrement]  
    [Column("id")]  
    public int Id { get; set; }  
    [Column("email"), Collation("NOCASE")]  
    public string Email { get; set; }  
    [Column("encrypted_password")]  
    public string EncryptedPassword { get; set; }  
    [Column("username"), Collation("NOCASE")]  
    public string Username { get; set; }  
    [Column("status")]  
    public byte Status { get; set; }  
    [Column("online")]  
    public bool Online { get; set; }  
    [Column("funds")]  
    public int Funds { get; set; }  
    [Column("owns_property")]  
    public bool OwnsProperty { get; set; }  
    [Column("nutrition")]  
    public int Nutrition { get; set; }  
    public int SpecialPoints { get; set; }  
}  
}
```

Adding a new account data entry

Account	Layer
NetworkIdentity	Default
Player (Script)	Player
Player Modules	Player (Clone) (Pla
Player Inventory	Player (Clone) (Pla
Player Nutrition	
Id	1
Username	FlorianL
Status	0
Funds	1000
Experience Points	100
	80

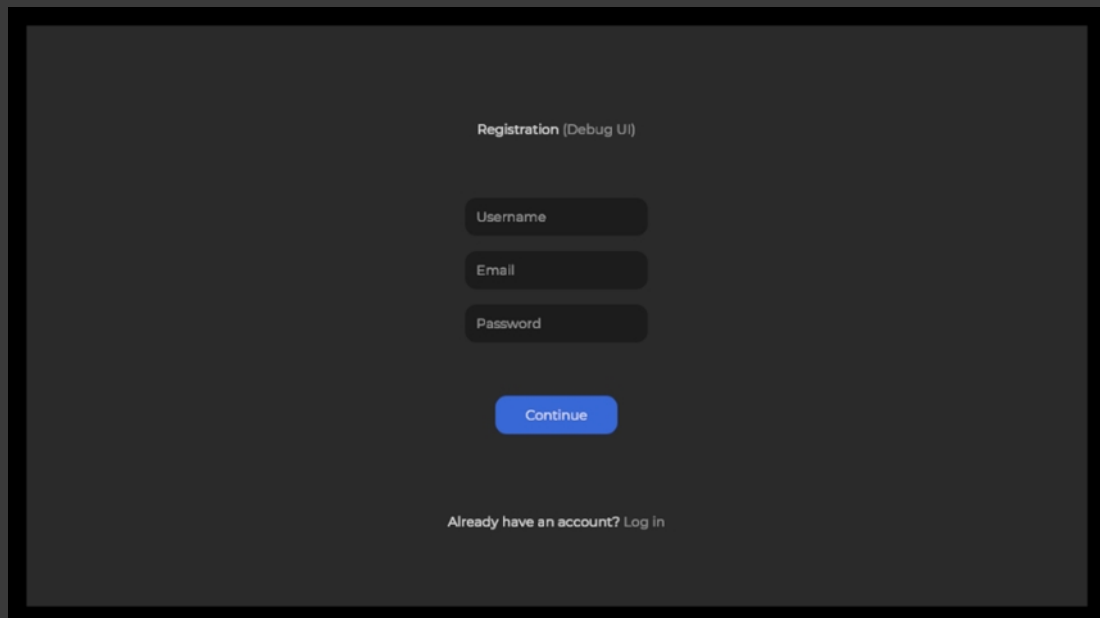

USER AUTHENTICATION

The user can **create** an **account** by **registering** and **logging** in with it.

Registration

If the user want to **register**, the user will be taken to this window shown below, where the user must enter the following information:

- **Username** (The username is displayed in the game above the player character and in the chat.)
- **E-Mail**
- **Password**

Registration (Debug UI)

Asset LICENSE

Permitted Use

This Unity asset ("**Horror Multiplayer Game Template**") is **licensed** for use in **personal** and **commercial** projects when **purchased** through the **official Unity Asset Store**, provided it is **integrated** into your **project** and not **distributed** as a **standalone file**.

Prohibited Actions

You may NOT **resell**, **redistribute**, **sublicense**, or **share** the **Asset** or any **individual file**, **modified** or **unmodified**, in any **form**.

Add MAP

In the following **video**, you will **learn** how to **add** a **new map**:

UNITY 6 **SETUP**

To ensure the **Horror Multiplayer Template** works seamlessly with **Unity 6**, follow these steps:

1. **Remove AI Navigation Package**

Open the Package Manager, switch to the Unity Registry, search for "**AI Navigation**", and click "**Remove**".

2. **Clean Up TextMesh Pro Assets**

Navigate to the following path:

Assets/Horror Multiplayer Template by Redicion Studio/ThirdParty/TextMesh Pro.

Inside the **TextMesh Pro** folder, delete everything except the "**Fonts**" and "**Resources**" folders.

3. **Verify Unity 6 LTS Installation**

Make sure you are using the **Long-Term Support** (LTS) version of **Unity 6**.

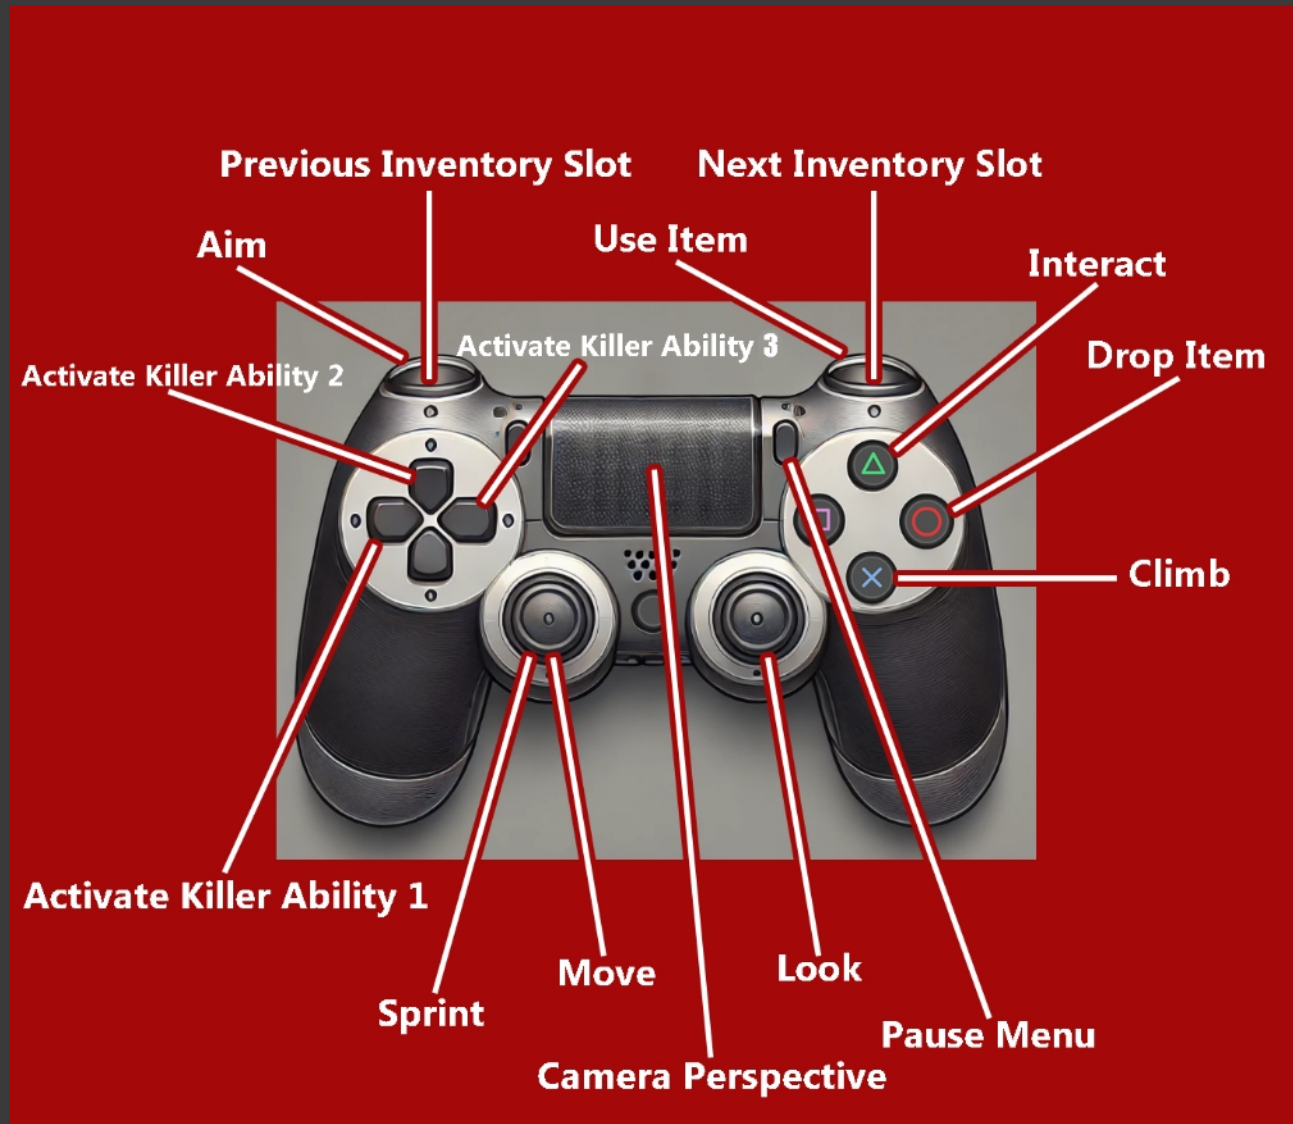

Additional Information:

After completing these steps, the **Horror Multiplayer Template** should function flawlessly.

Asset CONTROLS

Below, you'll find the default **key bindings** for the **Horror Multiplayer Template**. Players can **customize** their assigned **controls** at any time in the **Main Menu**, **Lobby**, or **Pause Menu** settings:

Controller:

Keyboard and Mouse:

E: Interact

X: Drop Item

Space: Climb

Left Mouse Button: Use Item

Right Mouse Button: Aim

V: Toggle Camera Perspective

Escape: Toggle Pause Menu

1: Inventory Slot 0

2: Inventory Slot 1

3: Inventory Slot 2

4: Inventory Slot 3

Left Arrow: Activate Killer Ability 1

Up Arrow: Activate Killer Ability 2

Right Arrow: Activate Killer Ability 3

W/A/S/D: Move

Mouse Movement: Look Around

Shift: Sprint

T: Chat
